N.B.: Availability of chosen variants and options must always be checked up

(\*\*) The fuel consumption depends on the feed material, machine setting, condition of wear parts, ...

## INDICATIVE PRODUCTION CAPACITY:

**EXAMPLE:** Feed material is granite ( $W_i=16$ ). If the crusher is set to a C.S.S. of 100 mm, the max. production will be between 168 and 200 t/h. Considering the bulk weight of the material of 1,6 t/m<sup>3</sup> (see TECHNICAL INFO Page 3), the production capacity will be between  $168 / 1,6 = 105$  m<sup>3</sup>/h and  $200 / 1,6 = 125$  m<sup>3</sup>/h. For Granite ( $W_i=16$ ), the production will be in the middle range = approx. 184 t/h.

The actual production depends on the material. If the Work Index  $W_i$  (see also TECHNICAL INFO Page 3) is low (10-14), the production will be on the higher range. If  $W_i$  is medium (14-18), the production will be in the middle range. If  $W_i$  is high (18-22), the production will be in the lower range.

WORK INDEX ( $W_i$ )	CRUSHABILITY
<10	very soft
10-14.	soft
14-19	medium
18-22	hard
>22	very hard
